

## **Tri Arrows Aluminum Announces Plans for the Further Expansion of Production Capacity**

Louisville, KY, December 2, 2016: Tri Arrows Aluminum is pleased to announce our intent to further expand our North American rolling capacity.

Tri Arrows Aluminum has received the approval from its owners to pursue an expansion of its production capacities. The total financing of these projects will approach \$175M and will target additions to their existing cold rolling and ingot casting capacities and capabilities.

Tri Arrows Aluminum is currently investigating potential locations for the expansion with the hope that that Logan Aluminum will prove to be the final selection once the engineering and financial analysis is completed over the next several months.

Tri Arrows Aluminum President Henry Gordinier stated, "I am very pleased that we have received the approval to proceed with our evaluation of equipment location and eventual construction of these expansion projects. These projects will strengthen our abilities to service our existing can customers while positioning us to take advantage of the growth in the automotive sector."
